Sage 100 2026 to be 64-bit Only

Sage Partner

SAGE 100 2025 NOW AVAILABLE

HERE'S WHAT'S NEW

The latest release of Sage 100 delivers many new features that customers like you have suggested. Here's a look at some of the key enhancements and notable updates in Sage 100 2025.

Request for Quote/Purchase Orders

Leveraging both Paperless Office and new features in Sage 100 2025, you can now:

1. Create a quote in Purchase Order Entry
2. Email a Request for Quote to one or multiple vendors using Paperless Office
3. Track and maintain the quote in Quote History

In addition within the Purchase Order module, a new option has been added that can require a cancellation code when deleting orders or quotes.

Sales and Customer Management

For better flexibility, the option to **expand the invoice number length to 20 characters** (up from 7 previously) has been added in the Accounts Receivable, Sales Order and Job Cost modules. Plus, associated forms, reports, and screens are automatically updated to reflect this.

In addition, there is now the capability to easily **copy package tracking numbers** so they can be pasted into emails or other documents to minimize the risk of error. In the Accounts Receivable module, additional capability has been added to make it easier to **view details of the last invoice date and amount posted** for a specific customer.

Inventory Management

Sage 100 2025 introduces the ability to add a Universal Product Code (UPC) or European Article Number (EAN) to inventory items. To make inquiries easier, the ability to sort by product line has been added to the Physical Count Reports. And for more flexible reporting, the ability to exclude items with zero balances has been added to the Inventory Trial Balance.

Reporting and Decision Making

With the latest release, you can enable audit tracking for sales and purchase orders which can then be accessed via the new **Audit Viewer** button which provides details on all changes, deletions and additions. Plus, new secondary views have been added to PO Request for Quote which now provides better insight on a single page, helping to expedite inquiries and related actions.

SAGE 100 BITS AND BYTES

Sage Future Update:
Session Catalog Now Available

For those attending the **Sage Future** conference in early June (or considering attending at the last minute), you can now access full details on all sessions and CPE courses online. Just click below to build your custom agenda, track sessions, reserve class seats, and more:

Session Catalog and Agenda Builder

What is Sage Future?

Sage Future is an annual user conference that brings both customers and Sage partners together to collaborate, learn, network, and have a little fun. In a nutshell, it's the evolution of what was formerly referred to most recently as Sage Transform and before that, Sage Summit.

Conference Details

When: June 3-5, 2025

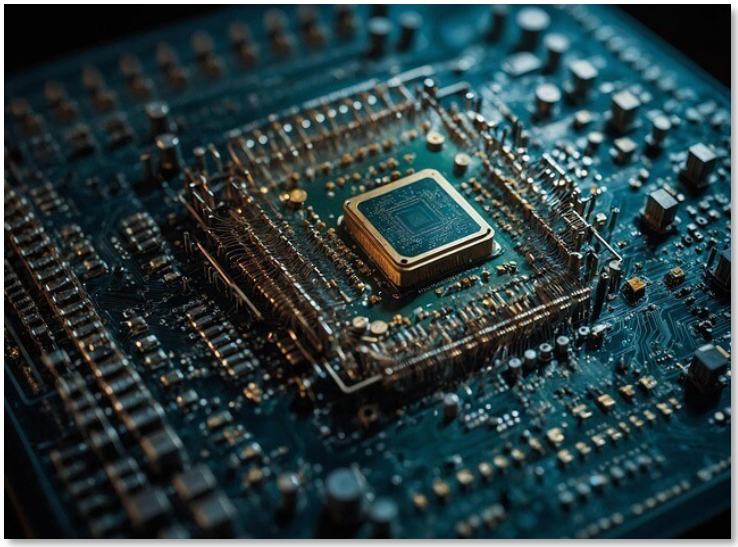

Where: Georgia World Congress Center in Atlanta, GA

Registration: Click Sage Future Registration for pricing and other details.

Looking Ahead to Sage 100 2026
64-Bit Installations Only

Having made the announcement late last year, Sage plans to release Sage 100 2026 **exclusively as a 64-bit application**.

In short, Sage 100 2026 will no longer run on a 32-bit Windows system so a little planning now could go a long way when the new release is available, likely in April 2026.

End of Support for 32-Bit

Without getting into the technical details of performance and memory limitations, security concerns, and other issues, Microsoft is ending support for the 32-bit Windows 10 platform in October of 2025. As such, Sage is following the lead by migrating Sage 100 exclusively to 64-bit.

Preparing for the Change

While the switch to 64-bit presents opportunity to modernize Sage 100 for better performance and scalability, it can also present challenges - particularly as it relates to compatibility with any integrations or 3rd party applications you may also be running.

A little preparation now can save you some headaches down the road.

Contact us directly if you need help determining whether your Sage 100 installation is 64-bit ready and if not, what you can do to get there before the release of Sage 100 2026.
